

My Test Plan: My Car service

**Bug Description:** Saved credit card not Usable for future rides

**Description:**

Users are unable to use their saved credit card when attempting to book a future ride. Either the saved card does not appear in the payment options, or selecting it results in a failed transaction. This issue disrupts the checkout process, requiring users to manually enter their payment details each time, leading to a poor user experience.

**Impact:**

- Users must repeatedly enter their credit card details, increasing friction in the booking process.
- Some transactions fail due to missing or incorrect saved payment data.
- Potential loss of revenue due to abandoned bookings.
- Negative user experience affecting customer retention.

**Steps to reproduce:**

1. Login in to the app and save a credit card during a ride booking.
2. Complete the ride successfully and attempt to book another ride.
3. Navigate to the payment screen and check for saved payment methods.
4. If the saved card appears, select it and proceed with payment
5. Observe if the transaction completes successfully or fails.

**Expected Results:**

- Users should see their saved card in the payment options.
- Payment should be processed successfully without requiring manual card entry.

**Actual Results:**

- The saved card does not appear, or selecting it results in a failed transaction.
- Some users receive generic error messages such as "Payment Failed-Please Try Again"
